

IMPORTANT NOTICE

Due to the information published in the media, both in Serbia and abroad, according to which our product, the 122 mm extended-range GRAD rocket had been used in the war in Ukraine, and in order to inform the public of the real situation, we state the following:

The enhanced 122 mm GRAD rocket is a product of EDePro d.o.o., and it was tested as such and its characteristics were verified.

Because of the rocket's significantly improved properties, and taking into account the recent political climate worldwide, there is a considerable interest in acquiring the said rocket.

However, EDePro d.o.o. never sold this rocket to countries in a state of war, and especially not to the countries participating in the war between Russia and Ukraine. We understand the severity of such a situation, given that Serbia had been at war in its recent history.

EDePro d.o.o. sold the said rocket exclusively to domestic legal entities, which were entered as such in the Business Register of companies which can export such products. The buyers of the rocket, as the rocket's owners, sold it further without our knowledge, influence and control in accordance with the licences for the export of armaments issued by the Ministry of Domestic and Foreign Trade of the Republic of Serbia.

Therefore, after delivering the goods to the domestic buyer, we are no longer entitled and able to find out who is the real end user of the goods in question.

Taking into account the aforementioned, we believe that our company was mentioned in a wrong context. Because of that, we consider it necessary to issue this statement and clarify the entire situation.

In Belgrade, on 8 February 2024

For EDePro d.o.o.

Prof. dr Branislav Jojić,
President of the Assembly

Slobodan Petković, director
